PySonar2 Python Flask PySonar2

Top Functions	Code Browser	README
method	<code>Flask.route(self, rule, **options)</code> <code>(Flask, str) -> () -> str -> () -> str</code> A decorator that is used to register a view function for a given URL rule.	
func	<code>templating.render_template(template_name_or_list, **context)</code> <code>str -> ?</code> <code> [str] -> ?</code> Renders a template from the template folder with the given context.	
func	<code>helpers.url_for(endpoint, **values)</code> <code>str -> ?</code> Generates a URL to the given endpoint with the method provided.	
func	<code>helpers.flash(message, category)</code> <code>(str, str) -> None</code> <code> (Markup, str) -> None</code> Flashes a message to the next request.	
method	<code>Blueprint.route(self, rule, **options)</code> <code>(Blueprint, str) -> ? -> ?</code> Like :meth:`Flask.route` but for a blueprint.	

render_templatePySonar2 intersection type

```
templating.render_template(template_name_or_list, **context)
str -> ?
| [str] -> ?
```

template_name_or_list str [str] str list str ? PySonar2 [str] ?.

“template name or list” PySonar2 PySonar2 Python
